

PROJECT PROFILE

RetroShield® System Metal Building Insulation Solution

Polk County Sheriff's Department Transportation Maintenance Facility Lakeland, FL

Project Information

Owner:

Polk County Sheriff's Department, Lakeland, FL

Insulation Contractor:

Combee Insulation, Lakeland, FL

Product Application:

RetroShield® System [4,000sf installed]

Completion Date:

June 2000

The Problem

Building was very hot and loud during rain storms, and 3" faced fiberglass metal building insulation was torn and falling down.

The Solution

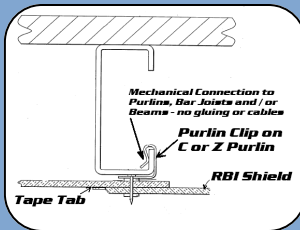

Combee Insulation retrofitted this pre-engineered metal building, with Fi-Foil's RetroShield® System - A system specifically designed for existing metal buildings.

Comment from Customer: "Before installing the RetroShield® System, the employees had to stand next to each other just to have a conversation. Now, since the install, we can use our normal voice to have a conversation. There is a considerable difference in sound reduction. I came in over the weekend to feed the dogs, during the heat of the day and it was considerably cooler than the previous days."

Comment from Insulation Contractor: "You could walk from one end of the scaffolding to the other end and notice a considerable difference. There was at least a 20% difference between the cavities that were insulated versus the cavities that had not been installed with the RetroShield® System."

One Roll & One Box
insulates 625 sq. ft.
