

# Project Profile - Jupiter School

May 29, 2001 Press Release

Fi-Foil Company's Retro Shield System addresses the problems of installing insulation in existing metal buildings. The system includes the patented Clip & Pin components and Fi-Foil's high performance reflective insulation. The Clip & Pin is designed to slide easily onto the roof or wall purlin. The insulation is then secured to the pin with a simple locking washer. The ease of installation significantly reduces labor without compromising the quality of the installation; in fact, perhaps two of the best benefits have been the permanent mechanical connections to the structure and the attractive finished appearance. Best of all, it provides a complete thermal and vapor barrier that completely covers the exposed purlins. The system provides high R-values, improves lighting, reduces sweating, and lowers sound, all at a competitive price. More information on this manufacturer in Sweet's 2001 Architects, Engineer and Contractors File section 07210/FIF, Sweet's Facilities & Owners File section 07210/FIF, and on Sweet's CD and sweets.com.
